

# 4 Reliable Antivirus Packages For Medium Sized Businesses 2019

Medium sized businesses are a step up from smaller scale operations, and this is important because the amount of data and the number of operations that are stored means viruses and hackers are more likely to target your business.

It's recommended not to take shortcuts on antivirus software as a result, and we've picked out the most dependable services that your business deserves. Stay confident about your cyber security with these strong defenses at your side.

## #1 [Symantec Endpoint Protection 14](#)

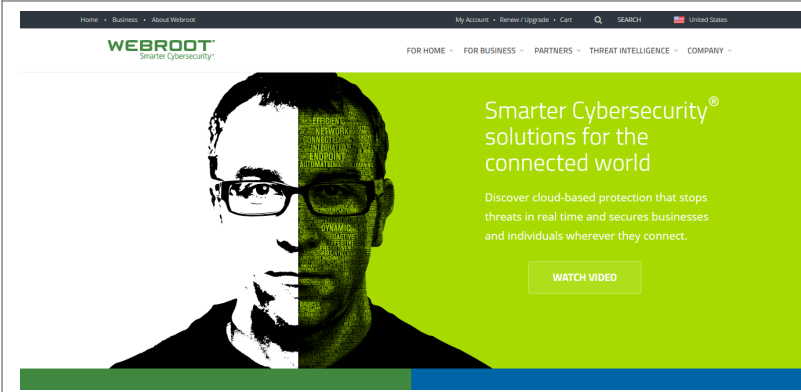

**Who suggested this product?**

The [Symantec Endpoint Protection 14](#) was recommended by Carsten Schaefer from [crowdy.ai](#). You can find out more about Carsten Schaefer [here](#) or read their product recommendation below.

The best is that it protects us from much more than just viruses. My business is also protected from malware, spyware and phishing.

## #2 Webroot Endpoint Protection

The screenshot shows the Webroot website's main page. At the top, there is a navigation bar with links for 'Home', 'Business', 'About Webroot', 'My Account', 'Renew/Upgrade', 'Cart', 'SEARCH', and 'United States'. Below the navigation bar, the Webroot logo is displayed. The main content area features a large banner with a man's face on the left and the text 'Smarter Cybersecurity® solutions for the connected world' on the right. Below the text, there is a 'WATCH VIDEO' button. At the bottom of the banner, there is a 'Buy here' link.

### Who suggested this product?

The [Webroot Endpoint Protection](#) was recommended by Chris Briggs from [SunRiver IT Partners](#). You can find out more about Chris Briggs [here](#) or read their product recommendation below.

Webroot is a robust security solution that offers more than just antivirus. Webroot Endpoint Protection provides services to detect patterns in application behavior to determine if the application could be a threat, even if the threat has not been detected before and then take action upon that threat.

Webroot also has DNS protection that protect end users from visiting those sites that contain malicious activity and that could infect or compromise the security of an endpoint. Webroot's Endpoint Security agent uses less resources during operation including during scheduled scans. Webroot's Endpoint Protection is contently up to date because of the way it communicates with Webroot servers during operation.

## Virus Blocker

Don't wait until viruses infect your devices—block them at the gateway. Modern malware threats target servers, appliances, laptops, tablets, even mobile phones. While it is important that all of these devices have end-point protection—with the latest versions of software and virus signatures—you may struggle with control over these devices as they connect offsite to unsecured networks, then return to your network with malware onboard. You need a first line of defense.

Bad guys are working tirelessly to develop malware that they let loose on the Internet. That's why you need a team of anti-malware experts working around the clock to defend you against the latest threats. Virus Blocker leverages signatures from Bitdefender, the leader in speed and efficacy, whose threat lab experts work 24-hours a day, 365-days a year to identify emerging threats.

**Get Virus Blocker**

Get industry leading anti-virus protection with 99.8% detection rates. Starting at \$10.00 a month!

Virus Blocker leverages signatures from Bitdefender, the leader in speed and efficacy, whose threat lab experts work 24-hours a day, 365-days a year to identify emerging threats.

Heuristic models provide an additional layer of protection against zero-day threats, and real-time updates with no system downtime ensure that your network is always protected. Virus Blocker identifies and blocks zero-day threats, viruses, worms, Trojan horses, botnets, unknown malware, and new infections.

**Who suggested this product?**  
 The [Webroot SecureAnywhere](#) was recommended by Marcos Gomez from [Office1](#). You can find out more about Marcos Gomez [here](#) or read their product recommendation below.

Officel uses Webroot's SecureAnywhere service internally because it offers a high level of security and centralized management, while being minimally intrusive to the end user's workflow.

It also functions with cloud-based management, which means no on-premise hardware or software is needed and the admin console is always up to date. Global Site Manager makes it easy to manage hundreds or thousands of endpoints at multiple sites or locations. It uses Zero-day Malware prevention, using predictive recognition technology across all of Webroot's endpoints.

There is Multi-Shield protection, offering predictive protection against the following: Real-time, Behavioral, Core System, Web Threat, Identity, Phishing, and Offline. User workflows are not affected, with daily scheduled scans normally taking 15-60 seconds and done easily in the background without the user ever knowing the scan is taking place. It offers custom reporting and heuristics, so admins can have the data needed to know what is going on in the network and make any necessary changes.
